

River Otter

Raccoon, Fox and Otter Kits - are born in dens in ~March in our area. By early May they may be seen near the mouth of the den. As they get older they accompany their mother (parents) on foraging trips and should be with an adult most of the time for several months until they are old enough to look after themselves. Youngsters seen on their own should be observed from a distance before any action is taken. Take an accurate note of the location and give us a call.
